Portfolio:

PROFESSIONAL SUMMARY

Junior backend developer with hands-on experience building real-world, data-driven web applications using Python, Django, Django REST Framework, and SQL. Strong understanding of backend architecture, asynchronous processing, and real-time communication. Comfortable working with existing codebases, taking instructions, and learning quickly in fast-paced startup environments.

TECHNICAL SKILLS

Languages & Frameworks

- Python
- Django
- Django REST Framework (DRF)
- SQL

Backend & Infrastructure

- RESTful API design
- Asynchronous task processing (Celery, Redis)
- WebSocket communication (Django Channels)
- Authentication (JWT)
- Background jobs & scheduling (Celery Beat)

Frontend (Basic)

- Vue.js (Option API – basic)
- HTML / CSS

PROJECTS

Football Stats & Blog Application (In Progress)

GitHub: <https://github.com/kinging1022/footiestat>

Tech Stack: Django, DRF, SQL, Vue.js (basic)

- Developed a football analytics platform for match statistics, trends, and regional performance using third-party sports APIs
- Implemented background data processing and caching strategies for efficient data updates
- Designed Django models and data pipelines with performance and scalability in mind
- Built a structured blog system optimized for SEO and content delivery
- Focused on clean architecture and extensibility for future features such as predictive analytics

Mediconnect – HealthTech Appointment Platform

GitHub: <https://github.com/kinging1022/mediconnect>

Tech Stack: Django, Vue.js, WebSockets, LangChain, FAISS, Sentence Transformers

- Built a backend system for user registration, doctor onboarding, and appointment scheduling
- Implemented Built an AI-powered doctor recommendation system using vector search (FAISS) and LangChain, matching patients with the most relevant doctors based on symptoms
- Implemented asynchronous task queues using Celery and Redis, including scheduled medication reminders
- Enabled real-time doctor–patient chat using WebSockets (Django Channels)
- Integrated video consultation functionality using Agora SDK
- Emphasized secure, asynchronous communication and real-time user

AI-Powered Spotify Playlist Generator

GitHub: <https://github.com/kinging1022/playlistpilot>

Tech Stack: Django, Vue.js, Gemini API, Spotify API, Web Scraping

- Built an application that allows users to generate Spotify playlists based on historical Billboard Hot 100 data or AI-generated themes.
- Scraped Billboard song data and used Gemini NLP to refine playlist recommendations.
- Integrated Spotify API to automate playlist creation and add songs dynamically.

E-commerce Website

Tech Stack: Django, DRF, Vue.js (basic)

- Built an e-commerce backend with product management, cart functionality, dynamic pricing, and order checkout
- Implemented JWT-based authentication and role-based access control
- Integrated image upload and CDN delivery using Cloudinary with WebP thumbnail support
- Designed scalable CRUD APIs and database models for core business operations

ADDITIONAL INFORMATION

- Actively seeking junior backend developer roles or internships
- Available immediately
- Comfortable working remotely or on-site
- Strong willingness to learn, take feedback, and grow within a team
